

Education & Engagement @ IRP

Georgia Tech's Office of Institutional Research and Planning (IRP) supports interactive learning with different campus stakeholders who want to improve their understanding of data in new ways.

Stakeholder Engagement

IRP provides one-on-one consultations and targeted presentations tied to specific initiatives, such as rankings, peer benchmarking, and market analysis. We facilitate ongoing stakeholder meetings and education conversations to clarify project scope.

Professional Engagement

IRP represents Georgia Tech through active engagement with AIR and AAUDE. By participating in conferences, leadership roles, and peer collaboration, we share innovative Institutional Research practices, bring back new ideas to strengthen our work, and help shape the future of data-informed decision support in higher education.

Specialized Workshops

IRP offers hands-on workshops to build practical data skills across campus, such as targeted sessions on Excel fundamentals and Power BI basics. Our core presentation, "IRP 101: Unlocking Georgia Tech's Data Power," demystifies IRP's role at Georgia Tech and highlights the importance of GT's data on campus and beyond.

Data Days

Data Days is an annual conference planned by IRP with OIT and EADI, designed to empower attendees with knowledge and tools to harness the full potential of data. The conference includes hands-on workshops that center on sound data practices, insightful reports, and dynamic analysis.
