IRP Service Delivery Triangle

Balancing Speed, Quality, and Complexity in Data Delivery

Data delivery involves trade-offs. You can prioritize two dimensions, but the third will be affected.

Quality

Reflects the accuracy, validation, and overall integrity of the deliverable.

Fast

Represents the speed of delivery, typically driven by a requested timeline from the stakeholder.

Complex

Represents the level of effort and technical depth required to complete the request.

Standard Turnaround: 10 Business Days

During non-peak periods, allowing time for validation and review to ensure quality.

Non-Peak: Late Spring - Summer

Peak: Fall - Late Spring
